INTRODUCTION

Domestic Violence and Gender-Based Violence (GBV) remain critical issues that affect individuals, families, and communities across Malaysia. Addressing these challenges requires not only legal and social interventions but also accessible digital platforms that provide timely information and emergency support to those in need.

Through this lab, you will learn how to:

- **Build a full-stack web application.**
- **Design and implement routing, controllers, and actions to handle web requests.**
- **Create dynamic HTML views and also can provide responsive frontend layouts for user interaction.**

Objectives

- To design and develop a responsive web platform utilizing modern HTML/JavaScript templates, Vue.js frameworks, or web frameworks (such as Laravel, Django, or Ruby on Rails) to deliver a seamless user experience across devices.

- To centralize essential support resources by creating structured modules for educational content ("What Is"), contact channels, legal enforcement frameworks, and emergency directories/hotlines for victims and advocates in Malaysia.

The Progressive JavaScript Framework

Vue.js is a rich, incrementally adoptable ecosystem that scales between a library and a full-featured framework.

— Builds on top of standard HTML, CSS and JavaScript with intuitive API and world-class documentation.

— Truly reactive, compiler-optimized rendering system that rarely requires manual optimization.

Vue.js website

ACTIVITY

- You are free to use any JavaScript Framework.
- In your webiste must have HTML Form.
- In your website must have PopUp Dialog.
- To display the output, you must using 4 different methods:
  - innerHTML
  - document.write()
  - window.alert()
  - console
- 5. You are free to use any JavaScript Operator, Control Statements, Event Loop & Date and Time Handling.

RUBRIC

Criteria	0	1	2	3	4
Submission	No submission. If this assessment doesn't require presentation all marks in criteria below mandatory to be set with no point (0).	Late Submission.	Last minute submission.	On expected time. Doesn't late.	Extraordinary. Submitted early before the due date.
Originality	100% Plagiarism.	50%-99% Plagiarism.	1%-49% Plagiarism.	0% Plagiarism.	Unique or the implementation shows a novel approach or creativity in the given context.
Understanding & Implementation	The login functionality is not implemented or is based on a previous work without any understanding. The `Password.txt` is not utilized.	Shows little effort in implementing the login functionality. Basic structure is present but with significant errors. `Password.txt` is not correctly used.	A basic login form is created and some attempt is made to read `Password.txt`, but with limited functionality or major errors in authentication logic.	Thoughtfully and correctly implements the login form, reads `Password.txt` and attempts authentication. Includes all required elements.	Very creative and exceptionally clever in implementing the login functionality, demonstrating a deep understanding of Ruby on Rails concepts and file handling.
Completeness	The assessment was not completed. The login form is not present.	Several required elements are missing from the assessment. The login form is incomplete.	Missing one or more of the required elements as stated in the instructions (e.g., form fields, basic controller logic).	Includes all of the required elements as stated in the directions/instructions (login form, basic controller, route).	Goes over and above all the required elements stated in the directions & instructions (e.g., includes error handling, basic styling, optional logout).
Presentation (Code)	Failed to present the code or the code is unreadable.	Minimal work is meticulously shown, but poorly organized.	Most work is meticulously shown, but with some organizational issues.	All the required code (controller, view, routes) is meticulously shown and reasonably organized.	Extra work (e.g., well-commented code, clear structure) is meticulously shown and well-organized.
Effort	Student demonstrates no effort.	Student demonstrates a little effort.	Student demonstrates a good effort in attempting the lab work.	Student demonstrates an excellent effort in completing the lab work.	Student demonstrates an extraordinary effort and goes the extra mile in the implementation.
Overall Project Organization	Student not submit and present.	Student either submits or presents only.	Disorganized assessment with minimal or limited variety of logic/syntax/grammar/spelling (if applicable).	Assessment was engagingly organized, complete and holds the attention of the evaluator.	Assessment was outstandingly organized the assessment with precise, illustrative use of a variety of styles and shows a lot of creativity.
Redo	The correction presented after Week 14.	Student take a lot of time to complete the correction.	Student ask to do a major correction.	Student ask to do a minor correction.	Student satisfy with grading and not required to do correction.
